Wellness Team, Medical Freedom Information, March 2022, Vol 1

Disclaimer: The content on this site is for informational and educational purposes only.

For medical advice, please consult with your primary care provider.

First things first, thank-you! for taking the time to read this. Our goal is to guide folks in researching for themselves what is going on with the vaccines and mandates. There's much information, and misinformation, out there making it confusing to know what's truth, what's propaganda, and what's downright lies and purposeful deception. We hope you will find this information useful. We highly encourage you to visit MOVCAAC.com to read further. Check out the "Wellness Information" tab: <https://movcac.com/health-and-freedom/>, watch "Their Stories:" <https://movcac.com/their-stories/>. Learn more about the Medical Freedom we are working hard to obtain for all:

Informed Consent

What exactly does that mean?

<https://www.ncbi.nlm.nih.gov/books/NBK430827/>

According to the NIH, "Informed consent is the process in which a health care provider educates a patient about the risks, benefits, and alternatives of a given procedure or intervention. The patient must be competent to make a voluntary decision about whether to undergo the procedure or intervention."

Coercion

What does it mean to coerce someone?

<https://www.merriam-webster.com/dictionary/coercion>

"...the use of express or implied threats of violence or reprisal (as discharge from employment) or other intimidating behavior that puts a person in immediate fear of the consequences in order to compel that person to act against his or her will..." In a nutshell, if you are told: "No Jab! No Job!," you are being coerced!

Risks vs Benefits of the "Covid" Shots:

Does the "vaccine" prevent you from getting Covid? *No*
Does the "vaccine" prevent transmission of the virus? *No*
Does the "vaccine" keep you out of the hospital? *No*
Does the "vaccine" keep you from dying? *No*
January 28th, 2022, the CDC released data from NY and CA, in the "Morbidity and Mortality Weekly Report," which demonstrated natural immunity was 2.8 times as effective in preventing hospitalization and 3.3-4.7 times as effective in preventing Covid infection compared with vaccination. The survival rate for Covid is ~99.8 %. For most, there is greater risk getting the shot than using supplements (p. 2) and obtaining natural immunity from Covid infection.

Mandate

What is a vaccine mandate?

<https://www.webmd.com/vaccines/covid-19-vaccine/vaccine-mandates#1-2>

"It's a requirement that says you must be vaccinated to do certain things like working, traveling, or even attending a concert. But the government or other authorities can't physically force you to get vaccinated." They can however, coerce you into taking the shot.

The Nuremberg Code

<https://history.nih.gov/download/attachments/1016866/nuremberg.pdf>

"The voluntary consent of the human subject is absolutely essential. This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element."

This means we should have informed consent; that we should be provided the information showing the risks vs benefits of any medication or treatment. It means we should have the freedom to say, "No!"

***Mandates are coercive and
take away our medical
freedom!***

Hospitals, Early Treatment, Self Care; What Can I Do To Help Myself Stay Healthy?

Prevention, Staying Healthy as Possible

You can use daily supplements for disease prevention, all available over the counter:

- Vitamin D3
- Quercetin
- Vitamin C
- Zinc
- Selenium
- Magnesium

You can take prophylactic medicines weekly such as:

- Ivermectin
- Hydroxychloroquine

For doses of supplements and medicines, go to <https://covid19criticalcare.com/wp-content/uploads/2020/11/FLCCC-Alliance-I-MASKplus-Protocol-ENGLISH.pdf>

Always check Drugs.com for interactions and side effects especially if you are on a daily regimen of prescription drugs.

Hospital Protocols

<https://www.covid19treatmentguidelines.nih.gov/management/clinical-management/hospitalized-adults--therapeutic-management/>

The hospital protocols for the treatment of the virus known as Covid are the same nationwide:

- Loved one is short of breath, a very scary situation.
- Loved one goes to the ER.
- ER diagnosis of Covid.
- Loved one admitted, NO Visitors allowed.
- Loved one put on supplemental oxygen.
- Loved one given Remdesivir & Dexamethasone.
- Vital organs such as kidneys and liver start shutting down (see more on Remdesivir).
- Loved one is put on a vent.
- Nutrition and fluids may be withheld or limited.
- Loved one passes by day 21.

<https://www.covid19treatmentguidelines.nih.gov/management/clinical-management/hospitalized-adults--therapeutic-management/hospitalized-adults-figure/>

Early Home Treatment, Stay Out of the Hospital

How many of you know someone that went to their primary care, local MedExpress, or Urgent Care facility, was diagnosed with Covid, and then sent home with instructions saying if you get to where you can't breathe go to the ER? No medications provided...just go to the ER when you get sick and scared enough?

We have heard that exact statement from hundreds of people.

So, what can you do? Start supplements and get a Respiratory Rescue Kit and have it on hand for "just in case" now. Then you will already have at home treatment ready in the unfortunate event you become ill. Order respiratory rescue kit products from Wil Spencer. Email: info@environotics.com First! Watch these videos:

"RESPIRATORY RESCUE KIT EXPLAINED" & "Dr. Wil Spencer- Discusses EVERYTHING"

<https://movcac.com/health-and-freedom/>

Know BEFORE You Go To The Hospital

CAVEAT: Our goal is always to keep folks out of the hospital. We understand that hospitals are still necessary and not saying you shouldn't have a heart attack or broken bone or whatever crisis treated. What we are saying is to know BEFORE you go.

We've had folks go to the hospital for broken bones, get diagnosed with Covid in the ER, then started on the hospital protocols with NO Covid symptoms at all. <https://movcac.com/their-stories/> Watch the video of Joyce Ann Creel's story.

Use early outpatient treatment to avoid the need for the hospital!

Drugs Commonly Given With The Covid Hospital Protocol

Drug Name	Brand Names	Link to Adverse Effects & Contraindications
Remdesivir	Veklury	https://www.drugs.com/drug-interactions/remdesivir.html
Baricitinib	Olumiant	https://www.drugs.com/drug-interactions/baricitinib,olumiant.html
Tocilizumab	Actemra	https://www.drugs.com/drug-interactions/tocilizumab,actemra.html
Tofacitinib	Xeljanz	https://www.drugs.com/drug-interactions/tofacitinib,xeljanz.html
Sarilumab	Keysara	https://www.drugs.com/drug-interactions/sarilumab,kevzara.html
Molnupiravir	Lagevrio	https://www.drugs.com/molnupiravir.html#warnings . EUA- drug interactions unknown!
Combo of Nirmatrelvir and Ritonavir	Paxlovid	https://www.drugs.com/drug-interactions/nirmatrelvir-ritonavir,paxlovid.html
Sotrovimab	Unk	https://www.drugs.com/drug-interactions/sotrovimab.html

Strongly urge you to look up these drugs and the interactions with commonly prescribed medications at the links provided. Some have numerous major or moderate interactions when taken with many commonly prescribed cholesterol (atorvastatin, simvastatin), and osteoporosis (Prolia, Fosamax, etc.) meds. Many are “emergency use” and if you are injured by them, there is no recourse. You can’t sue the pharmaceutical company.

Some have successfully added these medications to their “allergy” lists that are on file with their local hospitals. We don’t know if that will prevent them from trying to use them, but it does put them on notice that you are not supposed to be given that drug.

A Loved One Currently In The Hospital, Actively Ill...Help!

For hospital rescue reach out to: patientadvocatebulldog@protonmail.com

The patient intake form must be filled out to receive help for your loved one. The information is vital in order for us to help you! Additional Information is in the Patient Advocacy Guide:

https://movcac.com/wp-content/uploads/2021/10/Patient_Advocacy-Guide.pdf

If still at home, but actively ill, please reach out to obtain a Respiratory Rescue Kit (if you haven’t already purchased one for “just in case”...Highly recommended!).
